September 28, 2023

Dear Recruiter,

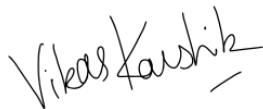

I am writing to express my keen interest in the position of Software Engineer at GlZ. I'm a B.Tech. graduate and have over 10 years of professional IT experience. I have led and successfully delivered enterprise-grade applications including tests, instrumentation and monitoring in production. My expertise lies in ensuring high quality and smooth delivery of the projects, meeting business requirements. I'm an agile practitioner and well versed with the industry best practices.

In my present role at Walmart, I'm leading a team of six people and I'm responsible for sprint planning, technology analysis, code reviews, architectural decisions and feature implementation. It is a platform team focusing on providing Telemetry services at Walmart scale in three regions, ensuring high reliability and scalability. During my tenure at ThoughtWorks, I led fast-paced green-field projects from inception, estimation, release planning to successful delivery for different clients. I led a team of 10 developers in a multi-vendor environment. I actively monitored development and identified any potential bottlenecks and blockers and mitigate those, ensuring timely deliveries and releases as per the plan. These projects included regular client engagement and feedback incorporation to align expectations between the stakeholders.

I've been a full-stack software developer and I've implemented cloud-based applications and services using a wide range of technologies, including Golang, C#, React-JS, Kafka, Docker, Kubernetes, Git, with CI/CD and monitoring capabilities. I value and promote inclusivity, diversity, creativity, sustainability, and Collaboration at my workplace.

I would welcome the opportunity to discuss the role further and how I can contribute to your organisation's success.

Sincerely,

Vikas Kaushik
