Dear Recruiter,

I am writing to express my keen interest in the available job opportunity at your company. In over 10 years of professional IT experience, I have successfully delivered enterprise-grade applications, microservices and libraries, including tests, instrumentation and monitoring in production. My expertise lies in ensuring scalability, reliability, and availability in all projects I undertake.

I am hands-on in Golang, Kubernetes, Docker, CI/CD setup, deployments, Kafka, Prometheus, Grafana, and well-versed with data structures and system design. At Walmart, I am responsible for designing and implementing SRE solutions, including autoscaling and anomaly detection systems, K8s operators, showback services, onboarding APIs, and Prometheus exporters. During my tenure at ThoughtWorks, I developed cloud-based enterprise web applications and data pipelines using a wide range of technologies, including Golang, C#, React-JS, Kafka, Docker, Kubernetes, Git, OAuth, CI/CD, REST APIs, and microservices.

I thrive in an environment that values inclusivity, diversity, creativity, sustainability, and collaboration. As an empathetic intellectual and first principle thinker, I am dedicated to delivering high-quality work and making a valuable contribution to the team's goals and milestones.
I would welcome the opportunity to discuss the role further and how I can contribute to your organization's success.

Sincerely,

Vikas Kaushik
