Dear Recruiter,

About me:
I'm a Software Engineer with a decade of professional IT experience and an inherent zeal for quality. I am looking forward for a job opportunity where I could create a positive impact by solving technical challenges. I thrive in an environment that has high regard for creativity, inclusivity, diversity and collaboration. I like to be among empathetic intellectuals first principle thinkers and live sustainably.
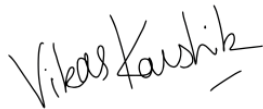

About my Work Experience:
My expertise lies in ensuring high scalability, reliability and availability in all projects I undertake. I've successfully delivered software projects in live production environments.
At Walmart, I work with Site Reliability Engineering Team. I've crafted and improved - Autoscaling and Anomaly Detection Systems, K8s Operators, Showback Services, Onboarding APIs and Prometheus Exporters with multi-cloud and disaster-recovery requirements.
At ThoughtWorks, I developed cloud based enterprise web-applications and data pipelines. As a polyglot programmer, I worked with Golang, C#, Java, Kafka, Docker, Kubernetes, Git, OAuth, CI/CD, Rest APIs, Microservices etc. Before ThoughtWorks, I programmed majorly in C#, .Net Core and developed REST-APIs, enterprise microservices.
I look forward to discussing how my technical proficiency and innovative mindset would add value to your organisation.

Thanks.

Sincerely,

Vikas Kaushik
